

PHAN NGUYEN GIA HUY

huy.phan@torontomu.ca | 647-761-3808 | Toronto, ON

SUMMARY OF QUALIFICATIONS

- Computer Science student delivering practical full-stack and AI-powered products for real users and clients.
- Built student platforms, client websites, and AI workflows with React, TypeScript, JavaScript, Python, Supabase, FastAPI, and REST APIs.
- Strong in responsive UI, authentication, deployment, debugging, and converting requirements into clean, usable software.

TECHNICAL SKILLS

- Programming Languages: Java, Python, JavaScript, TypeScript, C, C++, Rust, SQL
- Web Technologies: React, Node.js, HTML, CSS, Tailwind CSS, Vite, REST APIs
- Tools & Platforms: Git, GitHub, Supabase, Vercel, Railway, Modal, AOS, MOS Certified

EDUCATION

Bachelor of Computer Science (BSc): School of Computer Science **Sep 2024 - Exp 2029**

- Toronto Metropolitan University, Toronto, ON
- Current CGPA: 3.67
- Dean's List, Faculty of Science (2025-2026) - recognized for academic excellence.

PROJECT EXPERIENCE

MyCIP.ca (React, TypeScript, Supabase, Tailwind CSS) **Jan 2025 - May 2025**

- Engineered responsive React and TypeScript interfaces for a centralized immigration platform that helps students find guidance, requirements, and support resources faster.
- Implemented secure Supabase authentication and database-backed user flows, contributing to a 30% improvement in resource access speed across a 5-person team.
- Structured mobile-first Tailwind CSS layouts and navigation patterns to simplify dense immigration information into clear, scannable user flows.

SaiGon Sister Restaurant Website (HTML, CSS, JavaScript) **July 2026 - Aug 2026**

- Delivered a production restaurant website for a client, converting business goals into customer-facing pages for brand presence, menu discovery, staff details, and contact information.
- Built mobile-responsive HTML, CSS, and JavaScript flows with clear navigation, helping customers explore the restaurant quickly across desktop and mobile devices.

LinkedIn Job Description GenAI (Python, FastAPI, AI APIs) **July 2026 - Aug 2026**

- Developed an AI-powered job-description generator that turns role details, skills, and requirements into polished LinkedIn-ready hiring copy.
- Connected a FastAPI backend, AI generation workflow, and review-focused frontend so users can generate, revise, and finalize job posts in one flow.
