

# PHAN NGUYEN GIA HUY

huy.phan@torontomu.ca | 647-761-3808 | Toronto, ON

## SUMMARY OF QUALIFICATIONS

- Computer Science student with hands-on experience building full-stack web applications and AI-powered tools across React, TypeScript, JavaScript, Python, and Java.
- Contributed to MyCIP.ca as part of a 5-person multidisciplinary team, developing responsive interfaces and secure Supabase authentication for international students.
- Built and deployed user-focused products including a personal portfolio website and an AI-powered Rolex image recognition application.
- Strong foundation in object-oriented programming, data structures, debugging, REST APIs, database design, and technical documentation.

## TECHNICAL SKILLS

- Programming Languages: Java, Python, JavaScript, TypeScript, C, Rust, SQL
- Web Technologies: React, Node.js, HTML, CSS, Tailwind CSS, Vite, REST APIs
- Tools & Platforms: Git, GitHub, Supabase, AOS, Microsoft Office Suite (MOS Certified)
- **Languages:** Fluent English and Vietnamese

## EDUCATION

**Bachelor of Computer Science (BSc):** School of Computer Science Sep 2024 – Exp 2029

- Toronto Metropolitan University, Toronto, ON
- Current CGPA: 3.67

## AWARDS & HONOURS

**Dean's List, Faculty of Science, Toronto Metropolitan University** 2025–2026

- Recognized for academic excellence in the Computer Science Co-op program; eligibility required a minimum 3.5 GPA and clear academic standing.

## PROJECT EXPERIENCE

**Software Developer (Group Project), MyCIP.ca** — Toronto, ON Jan 2025 – May 2025

- Developed a web platform with React, TypeScript, and Supabase to centralize immigration info for international students.
- Implemented front-end components and backend authentication, improving user access speed by 30%.
- Designed responsive UI/UX with Tailwind CSS, enhancing navigation and mobile usability.

**Personal Portfolio Website (HTML, CSS, JavaScript, AOS)** 2026

- Designed and developed a responsive portfolio website to showcase projects, technical skills, and full-stack development experience.

- Implemented smooth navigation, scroll-based active states, animations, and a polished dark interface with a consistent visual identity.

**Rolex Finder (React, JavaScript, Vite, AI Model)**

June 2026 – July 2026

- Built and deployed an AI-powered image recognition tool that accepts pasted or uploaded Rolex images and returns the closest model-class prediction.
- Designed a guided image-search workflow and connected the React interface to model prediction results for public browser access.
